

D-Series

Mission critical content management and delivery

Harris Corporation's D-Series Automation Solution provides a reliable, scalable content management and delivery foundation for building the digital television facility of the future. D-Series efficiently and profitably bridges your transition from today's multi-channel content management and delivery environment to tomorrow's. Because every environment is unique, D-Series is extremely configurable to support more workflow configurations than any other automation solution.

With the release of **D-Series Version 4** with **Open Source Linux v2.6**, the same advantages offered to the larger multi-channel environments are now a cost effective solution for the environment with a lower number of channels but with the same mission critical requirements for high quality on-air performance.

D-Series is built by broadcasters for broadcasters, superbly designed as a truly frame-accurate, real-time multi-

D-Series provides the most reliable and robust automation solution for any size multi-channel facility.

channel automation solution.

HIGHLIGHTS

Harris designs and develops solutions that emphasize workflow efficiency. Years of continuous operation in the most challenging broadcast environments has earned D-Series one of the best reputations for quality and reliability in the industry.

Complete Redundancy with Automatic Failover

D-Series Automation provides automatic failover protection with error detection and correction features assuring high-quality and uninterrupted on-air performance.

Frame-accurate

With its real-time operating system and distributed architecture, D-Series Automation provides true frame accuracy.

Improved ROI

D-Series Automation supports a wide range of workflows resulting in reduced operational costs per channel.

Open standards-based

D-Series Version 4 is based on open source Linux 2.6. Other important standards supported are open metadata exchange, MXF, AAF, and V-ISAN.

Seamless scalability

D-Series Automation allows you the addition of channels and expansion of your operation without making your current hardware and software investment obsolete.

Integrated Ingest

D-Series Automation streamlines ingest, access and playout of digital assets by providing what Harris calls a "content aware infrastructure." This superior metadata engine is the foundation for the imminent rollout of interactive television where content and consumers are identified and targeted for new revenue streams.
